# Omega Resistance by RINAT

The most resistant latex in the world

El Látex *más resistente* del mundo

Up to 10 times  
more resistance

*Resistencia hasta  
10 veces mayor*

Designed for training

*Diseñado para entrenamientos*

Perfect balance between  
grip and resistance

*Balance perfecto entre  
agarre y resistencia*

# TYPES OF CUT / TIPOS DE CORTE

## FLAT CUT CORTE FLAT

This is the classic cut. As its name indicates, the glove structure and palm are flat. The latex from the palm is connected to the backhand by textile or other light material.

*Es el corte clásico. Como su nombre lo dice, indica que la estructura del guante y la palma son planas. El látex de la palma está unido al dorso por medio de una aplicación que puede ser textil o algún otro material.*

## ERGONOMIC CUT CORTE ERGONOMIC

This cut provides unmatched comfort by simulating the natural position of your hand while resting.

*Este corte brinda comodidad inigualable al simular la posición y forma natural de la mano en reposo, es decir, semiflexionada, reduciendo así la fatiga.*

## ROLLFINGER CUT / CORTE ROLLFINGER

The latex wraps around each finger almost completely, providing you more grip area. It's a really tight cut, exerts a little pressure but still feels comfortable. One of the most popular among Worldwide goalkeepers.

*El látex de cada dedo los envuelve casi por completo, dando así mayor área de sujeción. Es un corte más ajustado, ejerce un poco de presión sobre los dedos sin dejar de proporcionar comodidad. No por nada, es de los cortes más populares en Mundialmente.*

## NEGATIVE CUT CORTE NEGATIVO

This cut has seams inside the glove. It loses some latex surface but you feel it really tight on your hand. This is a very technical cut and since it is so tight you have great control when contacting the ball.

*Este corte tiene las costuras en el interior del guante. Pierde un poco de superficie de látex pero a cambio consigue un gran ajuste a la mano. Es un corte muy técnico que al ser tan ajustado consigue la máxima sensación de control y contacto con el balón.*

## NEGATIVE-ROLL CUT CORTE NEGATIVE-ROLL

The latex wraps around almost entirely most of the fingers and connects with the front by inner seams to give you better fit. It has been specially designed for those looking for maximum contact feeling.

*El látex de la palma envuelve casi por completo los dedos, uniéndose con la aplicación del dorso mediante costuras internas para dar la sensación de más ajuste, especialmente diseñado para aquellos a los que buscan máxima sensación con el balón.*

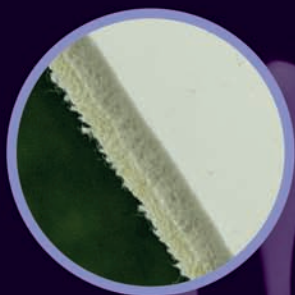

## ERGO-ROLL CUT CORTE ERGO-ROLL

Maybe say combines the best of two cuts, the Ergonomic and Rollfinger providing both comfort and natural catch-ready position while also giving maximum surface area for optimum grip and security.

*Mezcla lo mejor de dos cortes, el Ergonómico que aporta comodidad y ajuste perfecto a la forma natural de la mano y el Rollfinger que brinda mayor área de látex en los dedos para tener mejor sujeción y contacto con el balón. Este corte ejerce un poco de presión en los dedos pero a cambio obtienes mayor sensibilidad al contacto, es como una segunda piel.*

## TYPES OF LATEX / TIPOS DE LATEX

### OMEGA GRIP® 3mm Latex+3mm PU

German latex with maximum performance & durability. One of the best latexes in the market guaranteeing absolute and unmatched grip. Specially formulated for Rinat. Recommended for natural grass on dry or slightly wet conditions.

*Látex de origen Alemán con excelente desempeño y durabilidad. Es uno de los mejores látex en el mercado a nivel mundial garantizando un grip absoluto e inigualable. Formulación desarrollada especialmente para Rinat. Recomendado para césped natural, terrenos secos o parcialmente mojados.*

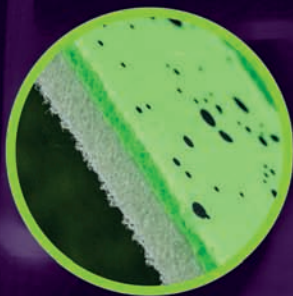

### OMEGA RESISTANCE®

3mm Latex + 3mm PU

German latex formula offers unmatched durability with good grip. Specially designed for abrasive terrain like artificial grass or hard ground.

*Látex de formulación Alemana que ofrece resistencia inigualable y un grip aceptable. Especialmente diseñado para terrenos abrasivos como césped artificial o terrenos duros.*

### DUO GRIP

Also known as Duo Latex. It has a double latex layer. The external side that contacts the ball provides great grip, while the inner layer adheres to your hand keeping you glove in place.

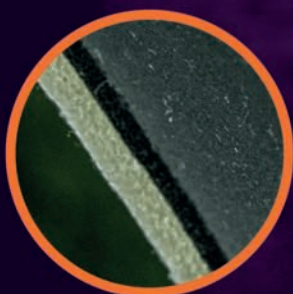

*También conocido comodoble palma. Cuenta con doble capa de látex: la capa exterior que contacta el balón proporciona un gran agarre mientras que el látex interno se adhiere a la mano evitando así que se mueva de su lugar, dando la sensación de que el guante y la mano son uno mismo para proporcionarte mayor seguridad.*

### SUPER SOFTY 3mm Latex + 3mm PU

Latex with good Performance and durability. For all terrain and weather conditions. Recommended for using in dry conditions and training.

*Látex con buen desempeño y durabilidad. Para todo tipo de terreno y condición climática. Se recomienda utilizar en seco. Ideal para entrenamientos.*

# FEATURES / CARACTERISTICAS

## WRAPPED THUMB

Latex from the palm wraps around the thumb to provide additional surface area.

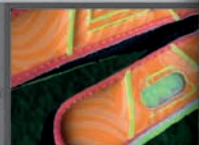

*El látex de la palma se corre por encima del dedo pulgar abrazándolo, dando así mayor superficie de contacto para tener una mejor sujeción.*

## SPINE

Protection system for the fingers, which provides strength and reduces the chances of injury.

*Sistema de protección para los dedos, que aporta fortaleza y reduce las probabilidades de lesiones.*

## EXTENDED PALM

The wristband has a latex application on the inside of the wrist just below the palm creating larger surface area and additional grip.

*El broche tiene una aplicación de látex en la parte interna de la muñeca, justo debajo de la palma, dando mayor superficie de contacto para mayor seguridad y mejor sujeción.*

## PUNCHING ZONE

Protects the knuckles when clearing or blocking shots potentiatiating impact on the ball.

*Tecnología desarrollada para proteger los nudillos al despejar o bloquear, además potencializa el impacto haciendo que tu despeje llegue más lejos y mantener a salvo tu portería.*

## SIDE SHIELD

Additional application on the side of the glove. This protects the latex from damaging when diving.

*Aplicación adicional de material resistente en la sección lateral del guante. Brinda protección al látex para evitar el desgaste causado por los lanzamientos.*

## ACTIVE CELL ZONE®

Ventilation zone created to improve air flow. Allows heat to escape keeping the inside of the glove cool with an external gel application for grip.

*Zona especializada en el guante destinada para mejorar la ventilación del mismo. Facilita la expulsión del calor interno mientras mantiene el agarre a través de una red externa de gel.*

## EZ FIT

Opening with Lycra in the external area of the wrist that facilitates the entry of the hand to the glove.

*Abertura con lycra en la zona externa de la muñeca que facilita la entrada de la mano al guante.*

# MOYA PANTS & 3/4

Moya Pants  
Black  
2PMA40-109

Moya 3/4  
Black  
4PMY40-109

## MOYA PANTS & 3/4 CAPRI

Have been manufactured for elite goalkeepers, who take their ability to the maximum & need to help improve their performance.

- Stretched cut to give you better movement freedom and better transpiration.
- THE two legs separately and united them with stretchable Lycra.
- Non-Skid Gel on the crotch, besides being decorative, it provides and maximizes the movement of the soccerball preventing it from slipping between the legs.
- Protection to the Knees and Hips we re-designed to make it more aesthetic and covers more accurately the impact zones.
- Moya Pants have a closure at the bottom starting at the ankles and ends in the Calf.
- 100% Polyester
